

- **Verification** = build right
- **Validation** = right product
- **Baseline** = approved artifact
- **Traceability Matrix** = mapping
- **Pipe & Filter** = streaming
- **Maintainability** = ease of fixing
- **Equivalence partitioning** = valid/invalid groups
- **DoD** = finish criteria
- **Process** = framework, not guarantee
- **Safety-critical** → V-model
- **Functional** = does something
- **Non-functional** = quality
- **Workflow** → Activity diagram
- **High cohesion** = inside module
- **AI reasoning** → Blackboard
- **SCM** → Change control
- **Git** → local full history
- **Input combinations** → Decision table
- **Review** = product, Retro = process
- **Irreversible action** → Recoverability
- **Refactoring** ≠ behavior change
- **Traceability Matrix** = mapping
- **Verification** → build product RIGHT
- **Validation** → RIGHT product
- **Functional** → system DOES something
- **Non-functional** → QUALITY of system

- **Baseline** → approved + change contro
- **Incremental** → early delivery + feedback
- **Spiral** → risk-driven
- **V-model** → dev ↔ test pairing
- **Workflow** → Activity diagram
- **Messages/time** → Sequence diagram
- **Valid/Invalid** → Equivalence partitioning
- **Combinations** → Decision table
- **States** → State transition
- **Refactoring** → NO behavior change
- **Maintainability** → easy to fix
- **Recoverability** → undo / rollback
- **Review** → product
- **Retro** → process
